Excel: Formula and Functions

This webinar that introduces us to formula and functions in a video suitable for entry level users. Starting from zero we introduce what functions are and spend a lot of time explaining how Excel works and why it does some of the things it does. If you just have a little knowledge from tinkering with Excel but want a deeper understanding of how it works this is the video for you.

If you have spent a lot of time using Excel you might not get as much from this webinar, I would then suggest you take a look at the webinar on [Excel Tables](#) or this one for [Intermediate Users](#).
