4. Security Toolkit: Specific Security Topics: What to Look into and Why

Below is a selection of topics in cybersecurity to guide you in thinking about your current security practices and what to do next. Each section has some information that all staff should know, including leadership and management, as well as some more detailed information that IT staff should know.

The toolkit also provides some suggested solutions and some guidance on pricing. These suggestions are not exhaustive. Pricing can be very complex depending on the packages and solutions you pursue, including how they dovetail with the products you already purchase (e.g. an expensive solution might not be as expensive when it's purchased as an add-on to an ongoing subscription you already pay for). Pricing can also vary depending on non-profit pricing and grant assistance. We've also included some outside general resources related to each topic.

 <u>ENDPOINT DETECTION AND RESPONSE (EDR)</u>	 <u>MULTI-FACTOR AUTHENTICATION (MFA)</u>	 <u>BACKUPS AND SECURING BACKUPS</u>
 <u>EMAIL SECURITY</u>	 <u>DATA SHARING</u>	 <u>PASSWORD MANAGEMENT</u>
 <u>ENCRYPTION</u>	 <u>OTHER TIPS ON TECHNOLOGY SETUP</u>
